ABOUT US

We make performance tuning solutions for vehicles of all types, designed to improve performance above original specification but within the manufacturers safety limits. We make installation as simple as it needs to be and all of our products are transferable to your next vehicle.

We introduced our first product in 1998 and we've been developing continually ever since. Our solutions are tailored to fit exactly to your specific application, whether that's leisure, enthusiast, government, military, agricultural or commercial uses.

To find out what power improvements and fuel savings you can expect on your vehicle, call the team on 0330 660 0938 or visit www.tunit.com and find your vehicle.

HOW DOES IT WORK?

The Tunit works by safely modifying signals sent from the engine's sensors to the engine's control unit. The optimised signals are then delivered to the engine with complete accuracy, in real time. The result of this is smoother power and torque gain delivered through the entire RPM range. With installation at a Tunit dealer and bespoke tune, the performance can be increased at the exact point in the RPM range you feel you need it. We produce progressive and consistent gains meaning you won't feel any sudden surges or power drop off. Turbos and other mechanical parts are not directly altered, meaning there is no extra strain on this or other engine components. The original ECU programming is not removed or altered, meaning if the Tunit is removed the vehicle goes completely back to standard with no trace of modification.

FUEL SAVINGS

Tunit has been proven to provide genuine fuel savings of 12% when tuning diesel engines. This was verified by a university study as well as an independent survey of over 9,000 Tunit customers owning a variety of cars, 4x4s, vans and trucks. The results showed an average saving of 12% and continual trials by fleets continue to return results of 12% and over.

The study carried out was similar to euro emission standards tests. Fourteen separate tuning manufacturers products were sampled and the tests were ran repeatedly using the same diesel engine.

Tunit was the only performance enhancing product shown to improve performance, save fuel and reduce emissions simultaneously.

75% OF TUNIT USERS SAVE OVER **£40** PER MONTH ON FUEL

REDUCED EMISSIONS

Tunit have also been shown, by the same study, to reduce engine exhaust emissions by 27% below that of the manufacturer, alongside the fuel savings stated above. All other products tested increased exhaust emissions by as much as double.

Additionally, the Tunit was the only solution shown to have no adverse effects on the engine, such as excess heat.

ADVANTAGE 3

DIESEL & DIESEL HYBRID TUNING

When it comes to diesel and diesel hybrid tuning, we have two options available covering all modern applications. Both options provide you with outstanding performance and reliability.

The Tunit Advantage 3 is our flagship diesel model and the pinnacle 20 years of experience in performance and economy tuning and is by far our most popular product. One of the most powerful benefits of the Advantage 3 is the ability to have it bespoke tuned by a Tunit dealer, which allows you to have a safe and effective performance tune tailored exactly to what you're looking for. If your main focus is motorway driving, economy, towing, high performance or any combination of these factors, then a bespoke tune is definitely the best way to go.

Every Advantage 3 comes with lifetime part exchange as well as a five year product warranty and a two year engine warranty. We are proud to disclose that in our 20+ years of business none of our customers have claimed via the engine warranty.

INCREASED PERFORMANCE,

OPTIMUM PLUS
PETROL & PETROL HYBRID TUNING

The Optimum Plus is easily the simplest and most feature rich method of performance tuning when it comes to petrol and petrol hybrid vehicles. The ability to control your performance via your mobile phone gives you unparalleled flexibility, easily switching between Eco, Sport and Sport+ whenever you need to.

Installation of the Optimum Plus could not be simpler, through one universal connection inside the car. In minutes the Tunit improves the performance with an option to choose between modes via the mobile app.

POWER PEDAL PRO
THROTTLE TUNING

25 YEARS OF TUNIT

The Tunit Power Pedal Pro is a method of throttle tuning developed using racing technology to provide outstanding improvements to throttle response. This provides an increase to performance without a physical increase in BHP or torque. The application of performance delivery is chosen using modes via our smartphone app. The pedal performs well as a standalone product but when used in conjunction with our performance products, it produces incredible results, completely transforming your driving experience.

For a cost effective upgrade which completely transforms the feel of your vehicle and is completely adjustable to suit your needs, the Power Pedal Pro is the perfect option. It works especially well when it comes to heavier diesel pickups and 4x4s which lack that initial power when moving off.

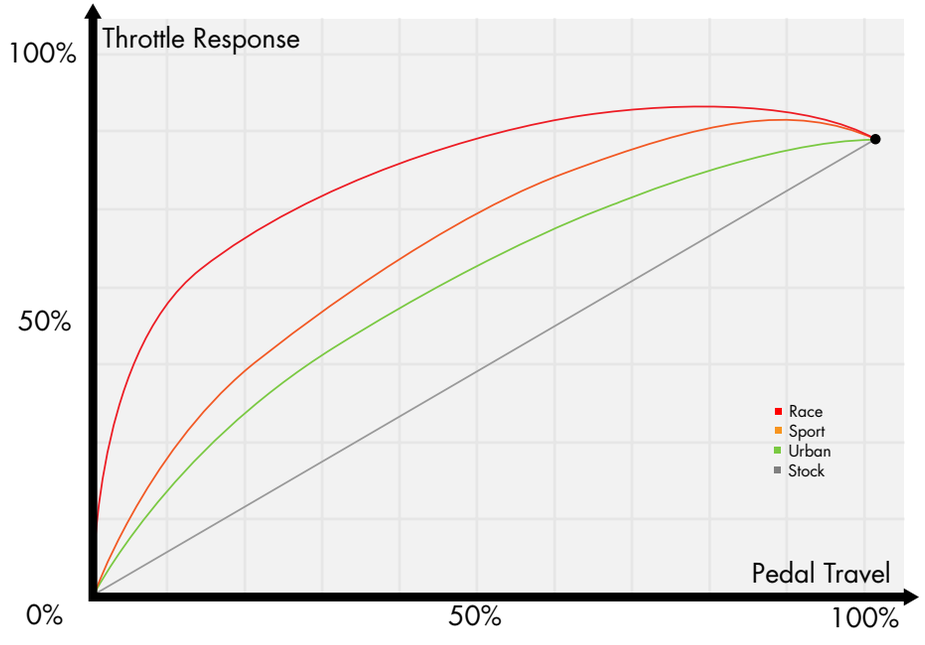
The graph shown below illustrates the adjusted throttle curve for the different settings you will find in the app. The app even comes with a custom tune setting which allows you to adjust the response manually and find the perfect sweet spot for your vehicle.



ADVANTAGE C-24
COMMERCIAL TUNING

25 YEARS OF TUNIT

Tunit have researched and developed tuning products for trucks for over 20 years in order to produce the very best in performance and economy. Considerable performance gains, which are mainly improvements in torque, keep a truck at peak productivity, allowing it to tackle every job with ease. Couple this with huge improvements in fuel economy and the Advantage C-24 also tackles one of the most expensive overheads a company faces.

Although the C-24 is simple to install via original electrical connections, a bespoke tune through a local dealer is always recommended to achieve maximum efficiency for every application.

AVERAGE TRUCKS' ANNUAL SAVING

£10,000+

FEATURED INSTALLATION

Craig uses his truck for transporting everything from mobile generators to steel containers, often over long distances. His MAN TGX 26.480 is equipped with a hiab crane, enabling heavy cargo to be safely loaded and unloaded without the requirement for additional lifting equipment. This made it the perfect candidate for a Tunit and due to the high mileage, there were massive savings to be made on running costs.

Craig was thrilled with the result and reported back that he has seen roughly a 0.75 mpg improvement on top of the great performance benefits. This equates to 15% better fuel economy and a rough saving of £11,336 a year, based on 70k mileage.

ADVANTAGE A-24
AGRICULTURAL TUNING

25 YEARS OF TUNIT

Whether you operate a tractor, telehandler or combine/forage harvester, maximising productivity and minimising down time are key factors in maintaining a profitable business. The Advantage A-24 has been developed solely with agriculture in mind, featuring an extra tough product housing and water-resistant connections.

The A-24 is designed to tackle a range of applications and whatever the day's work demands. Depending on your application the demand on the vehicle can vary massively which is why a bespoke tune can have a huge impact on the day to day efficiency of your machine.

AVERAGE TRACTOR ANNUAL SAVING

£10,000+

FEATURED INSTALLATION

When tuning for agricultural application, we always make it our priority to identify with the farmer exactly how they currently use their machine to ensure we can provide the best tune to suit them.

This McCormick X7.650 has a varied array of duties. Like many medium sized farms diversity is the key and this X7 covers duties from cultivating to silage and heavy tanker work. The A-24 is ideal for this as it can be bespoke tuned to give the performance where it is needed for each job. This X7 was tweaked on site to provide increased torque low down for those heavy low speed jobs & tuned further for more BHP at higher rpm to maintain better speeds on and off road. With an extra 12%+ of fuel savings the 320L tank needs refilling less meaning more time in the field.

DEALER NETWORK

At Tunit we uniquely offer a strong and long-standing dealer network throughout the UK and overseas. Local installation and support is as important now as it has ever been, with each Tunit dealer able to offer an individual and bespoke tune no matter the vehicle.

A bespoke tune is important when it comes to getting the most out of your tune, every vehicle is unique and so often require different parameters in our software to further optimise your performance. With a bespoke tune you can talk the dealer through what you use your vehicle for most, allowing them to tune specific to your application and ensure you are happy with the end result.

Find your local Tunit dealer by calling 0330 660 0938 or visit tunit.com/dealers.

We are always looking to grow our network of dealers and create great business relationships, if you're interested in becoming a Tunit dealer do not hesitate to get in touch.

WARRANTIES

Tunit has led the way with quality assurance and was the first tuning company to provide a five year product and two year engine warranty. The Tunit is designed to work within the manufacturers safety parameters and has never caused an issue that resulted in the use of the engine warranty.

PART EXCHANGE

We value customer retention highly therefore all of our base products provide a three year part exchange. Our premium products, offer "Tunit for life" so you can part exchange at any time in the future, meaning you never pay full price to tune a vehicle again.

SUPPORT

Here at Tunit we are manufacturers that care. We will always be available to help throughout installation and beyond if you ever have technical issues.

TRY BEFORE YOU BUY

This can be organised through one of our dealers and allows you to try out the Tunit on your vehicle free of charge. After trying the product out if you are not satisfied with the Tunit there is no obligation to pay. If this has been organised through one of our dealers, all you will pay for is labour.

FOR HELP AND ADVICE

Our professional and experienced performance advisors are on hand via phone, email or chat, to advise on the best product solutions for your vehicles and needs.
